

# About Riverland

**With our strategic location along the banks of the Mississippi River just north of downtown Baton Rouge, acquisition of critical raw materials and delivery of products to our customers are seamless processes.**

**Before deciding to start their own business, Troy Kairdolf and Marty Nichols had become successful plant managers at other catalyst and adsorbent manufacturing companies in the region. In 1999, Riverland began as an Alumina Trihydrate drying facility for one of the local alumina refineries. Since then, Riverland has grown to over 50 employees and has positioned itself with many other companies as a viable option in their supply chain management. We are located in Baton Rouge, Louisiana on over 38 acres of land that is easily accessed by the interstate or Mississippi River.**
